OBJECTIVE

Game Design and Development student experienced across gameplay programming, game design, technical design, level design, and narrative development using Unity, Unreal Engine, C#, C++, and Blueprints — with hands-on experience independently shipping gameplay systems, levels, UI, and original game assets. Seeking entry-level, junior, internship, and co-op opportunities in game development.

EDUCATION AND AWARDS

Bachelor of Science, Game Design and Development

Expected May '27

Rochester Institute of Technology | Rochester, NY

- GPA: 3.5
- Recipient of the RIT Founders Int'l Scholarship

Relevant Coursework: Development for Games, Level Design, 2D Animation and Asset Production, 3D Animation and Asset Production, Interactive Media Development, Game Web Technology, Storytelling, Intro to Creative Writing

SKILLS

Game Development: Unity, Unreal Engine, Unreal Blueprints, Git, Cinemachine, Unity Input System

Programming: C#, C++

Game Design: Gameplay systems, combat design, enemy design, boss encounters, gameplay balancing, playtesting

Technical Design: Gameplay scripting, prototyping, debugging, technical documentation, systems implementation

Level Design: Blockouts, player flow, pacing, readability, encounter design

Art & Animation: Blender, Maya, 2D pixel art, sprite animation, UI assets, gameplay VFX

Narrative: Interactive storytelling, narrative design, game writing, environmental storytelling

PROJECTS

Ilusão — Released Interactive Fiction Game

Released

Solo Project

- Independently designed, wrote, and published Ilusão, a released psychological horror interactive fiction game exploring Brazilian folklore, memory, and trauma, set in 1973 Brazil
- Designed a branching narrative structure with meaningful player choices, inspired by personal and cultural folklore
- Built and shipped both browser-playable and Windows-downloadable versions of the game, publishing to itch.io

Nature of the Unknown — Solo Game Project

2026

Unity / C#

- Independently designed and developed a 2D action-platformer in Unity, handling gameplay programming, systems design, level development, pixel art, animation, UI, testing, balancing, and production
- Created responsive player movement and combat systems including double jumping, melee attacks, dashing, dodge-parries, projectile reflection, counterattacks, health, damage reactions, and knockback
- Designed and programmed multiple enemy archetypes and a multi-phase Spider boss using distinct combat behaviors, projectiles, environmental hazards, traps, state transitions, and arena mechanics, then balanced these encounters through repeated playtesting
- Created original pixel-art characters, enemy sprites, animations, environment assets, UI elements, and gameplay effects
- Developed supporting systems including pause and game-over states, win conditions, tutorial communication, camera behavior, enemy death effects, and scene transitions, managing the project independently through a complete playable vertical slice

The Truth Behind — Game Design & Narrative Project

Feb '25 — Oct '25

Unreal Engine

- Designed a third-person action RPG concept focused on combat mechanics, player progression, level structure, and narrative systems
- Created gameplay documentation defining player abilities, combat flow, progression, worldbuilding, and core game systems
- Applied historical and literary research to ground environments, characters, mechanics, and narrative themes, using the project to prototype action-oriented gameplay concepts

EXPERIENCE

Teaching Assistant — Game Design & Development

Aug '26 — Present

Rochester Institute of Technology

- Support instruction across two Game Design and Development courses, assisting students with game development concepts, design processes, assignments, and project work
- Provide feedback and guidance to students during development, helping identify design, technical, and implementation problems
- Assist the instructor with classroom activities, project support, communication, and student learning
- Strengthen mentoring, technical communication, leadership, and problem-solving skills while supporting game development education

Game Writer / Programmer

May '25 — Aug '25

Changeling VR

- Collaborated with designers, programmers, and artists to develop a first-person narrative mystery game using Unreal Engine 4, C++, and Blueprints
- Implemented gameplay-driven narrative mechanics, interactive elements, and level logic supporting exploration, puzzles, and progression
- Wrote, rewrote, and supervised scripts across multiple levels while maintaining gameplay tone, pacing, and narrative consistency
- Participated in playtesting and implemented changes to improve gameplay flow, readability, and narrative delivery
- Worked within a multidisciplinary development pipeline alongside programming, art, design, and writing disciplines

Supply Intelligence Assistant

Jan '23 — Aug '23

Voratte Procurement & Sourcing | Louveira, São Paulo

- Created structured reports, presentations, and technical documentation for clients
- Analyzed procurement and sourcing information to support workflow improvements and decision-making
- Collaborated with international clients and teams, strengthening professional communication, adaptability, data analysis, and cross-functional problem solving
